

Arlim Paul Macaldo

arlim.macaldo@gmail.com | (702) 964-9958 | github.com/ArMac05 | linkedin.com/in/arlim-macaldo

Data-engineering-focused computer science student with hands-on internship experience in SQL, BigQuery, and analytics tooling. Skilled in Python, ETL/ELT workflows, data modeling, and building reliable, maintainable data pipelines. Motivated to contribute to engineering teams through clarity, reliability, and continuous learning.

EDUCATION

University of Nevada, Las Vegas — BS Computer Science

Expected Dec 2027

GPA: 3.65

- Coursework: Data Structures, Computer Organization, Building Applications in the Cloud, OOP, Systems Programming (x86 assembly), Statistics, Technical Writing

College of Southern Nevada — AA Computer Science

Aug 2025

GPA: 3.65 · Dean's Honor List

- Coursework: Data Science, Database Management, Data Structures, Mathematics

EXPERIENCE

Neato — Data Intern (Business Analyst)

Las Vegas, NV · Apr 2026 – Aug 2026

- QC'd and validated 20+ BigQuery tables during a company-wide data warehouse migration, reconciling new tables against the legacy database to confirm parity or improved accuracy before cutover
- Rebuilt Omni Analytics dashboards to run on the new data warehouse, maintaining continuity of brand reporting throughout the migration
- Wrote and validated SQL queries in BigQuery to support reporting and analysis of e-commerce brand performance data
- Built an internal AI plugin (Claude, Python, React, TypeScript, SQL, BigQuery) that generates an interactive *Year in Review* report for any client brand — a prompt-driven workflow producing HTML reports with custom charts and interactivity

PROJECTS

NBA Medallion Data Pipeline

Personal Project

Python, SQL, Docker, Airflow, DBT, DuckDB, PowerBI, balldontlie API

- Designed an end-to-end data pipeline using medallion architecture (Bronze, Silver, Gold) to ingest and transform NBA game data
- Automated pipeline runs with Airflow scheduling and containerized the environment with Docker for reproducible, isolated development
- Built a PowerBI dashboard delivering player and game insights from the Gold layer

Client Website Development — Bit2Byte Club

github.com/Bit2Byteclub/slotShopSite

Node.js, React, Tailwind

- Collaborated with a student team to build a functional, interactive website for a client
- Contributed front-end components, responsive layouts, and user-focused design improvements

TECHNICAL SKILLS

Languages: Python, SQL, C++, TypeScript, JavaScript, HTML/CSS

Data & Cloud: BigQuery, Omni Analytics, Airflow, DBT, Docker, DuckDB, PowerBI, Pandas, NumPy

Web & Tools: React, Node.js, Tailwind, Git, Vercel, Excel/Google Sheets, Claude (AI-assisted development)

Concepts: ETL/ELT, medallion architecture, data modeling, relational database design, data QC & validation
